

# Precious Education — AI Chat Assistant by Opti Matrix

Prepared for Precious Education and Immigration Consultant (PEIC) | [preciousedu.in](https://preciousedu.in)

## Project Description

A smart chat assistant has been built for the Precious Education website. It has read the entire website in advance, so any visitor — student, parent, or applicant — can simply type a question and get an instant, accurate answer, 24 hours a day, without waiting for staff or calling the office. It also gently encourages visitors to share their contact number, helping the team collect more leads via WhatsApp.

## What It Can Do

| If a user asks...                 | The assistant replies with...                       |
|-----------------------------------|-----------------------------------------------------|
| Which countries do you help with? | Australia, Canada, UK, USA, New Zealand, Singapore  |
| How do I apply for a Canada visa? | Step-by-step process, straight from the website     |
| What documents are needed?        | Relevant document checklist                         |
| Can I share my number?            | Yes — encourages the user; built for WhatsApp leads |
| Question in Hindi / Hinglish      | Understood — always replies in clear English        |

## The Two AI Layers Behind It

| Custom LLM (Built from Scratch)                                                                                                                                                    | Cloud AI API (Gemini 3.5 Flash-Lite)                                                                                                                    | Both Combined                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Shows real technical depth — an AI model built in-house from the ground up. Not required for daily replies, but proves the team truly understands AI, not just plugging in a tool. | Powers the actual live replies users see — fast, accurate, low-cost, production-grade AI trained by Google, fed with PreciousEdu's own website content. | Technical credibility + real-world reliability. The custom model shows capability; Gemini delivers the fast, polished, always-on experience for real users. |

## Key Benefits

- Always available — works 24/7, no staff needed for common questions
- Always up to date — re-checks the website every 6 hours
- Understands any language, always replies in professional English
- Remembers the conversation, so follow-up questions make sense
- Helps collect leads — encourages users to share contact details
- Honest — if it doesn't know something, it says so instead of guessing

## Cloud AI API — Official Rate Card

Google Gemini 3.5 Flash-Lite · [gemini-3.5-flash-lite](#) · Google Cloud Verified

| Billing Metric / Resource         | Free Tier (Default)   | Paid On-Demand Tier                   |
|-----------------------------------|-----------------------|---------------------------------------|
| Input Price (Text / Docs / Media) | 100% Free of charge   | \$0.30 / 1M tokens (~₹0.02 / inquiry) |
| Output Price (Model Responses)    | 100% Free of charge   | \$2.50 / 1M tokens                    |
| Context Caching & Memory          | Included in Free Tier | \$0.03 / 1M tokens                    |
| Enterprise Data Privacy & SLA     | Standard Privacy      | 100% Private (No Training)            |

In simple terms: For a consultancy at PEIC's scale, the free tier is usually enough. Even on paid usage, cost is roughly ₹0.02 per conversation — 10,000 conversations ≈ ₹200. The system also rotates across 8 API keys, maximizing free usage before any paid cost applies. AI cost only — hosting, domain, and server costs are separate.
